

Certified in Cybersecurity (CC)

Course Description

What makes Certified in Cybersecurity (CC) so unique is that it requires no experience or formal education — only basic knowledge of information technology (IT) is recommended. In that sense, it opens opportunities in cybersecurity to a much broader pool of candidates, including recent graduates, career changers and IT professionals.

As the true entry point to career excellence, Certified in Cybersecurity starts newcomers on their path to advanced cybersecurity certifications and future leadership roles.

For organizations, it helps develop new talent for their teams to build a stronger line of defense. It gives them the assurance that newly certified team members understand fundamental security principles and operations, network security and access controls and that they have the skills to meet and exceed performance standards in their beginning roles.

Course Duration:

1 day

Required Experience:

There are no specific prerequisites to take the exam. No work experience in cybersecurity or formal education diploma/degree is required.

Course Outline:

- Security Principles
- Business Continuity (BC), Disaster Recovery (DR) & Incident Response Concepts
